

Gentlemen, It is my understanding that there is a petition up, NAB #04-160 that is trying to stop MY xm radio service. Please understand that this is one of the better items to come across travel since interstates. In an "overtheroad" cmv, it's the best thing since powersteering. Lets mention "Safety" . I can put my xm on one station in North Carolina and listen to that same station all the way to Washington state. The government is enforcing "hands free" phone laws because of people fiddling with phones, knobs, and buttons. It is alot safer for me and the motoring public for me to use my onetouch xm radio that to fiddle with knobs, buttons and dials on am/fm. I am also sure that insurance companies would like less payouts from accidents caused by "fiddling". I can't watch TV driving my truck to get weather/traffic updates. And I don't want to be "fiddling" with knobs hunting for updates on unfindable radio stations. Weather info is important in my job and I need it now not thirty minutes from now. Please kill this petition for traffic/weather info holdback from xm radio. It's for my safety and yours. Think of this as you sit in a traffic jam wishing you had hit that one button that would have told you about the backup! Thanks, Bless this one nation under GOD. Harley Logue
